

Hong Kong Continence Society

Certificate Course in Continence Care

Objective: Incontinence is one of the commonest problems affecting many people and is a challenging task for all healthcare workers of various specialties. The objective of the course is to introduce the basic knowledge and skills in investigating and managing incontinence.

Target participants: The course is most suitable to doctors of all specialties, nurses and allied health professionals who will encounter patients with incontinence problems and are interested to learn more about continence care.

Venue: Lecture Theatre LG1, Ruttonjee Hospital
